

# ARTSLISTE MED NODC-KODER, NORSKE, VITENSKAPELIGE OG ENGELSKE NAVN

versjon 3.1

av

Sigbjørn Mehl, Asbjørn Borge, Padmini Dalpadado,  
Åge Fotland, Harald Gjøsæter og Hildegunn Mjanger

Desember 1995

## FORORD

Denne utgaven erstatter en tilsvarende oversikt fra 1990. Listen over artsnavn er et forsøk på å gi en veiledning til brukerne ved Havforskningsinstituttet om hvordan artsnavnet staves og om tilhørende taksonomisk kode. Listen inneholder mer enn 2 300 vitenskapelige (latinske) artsnavn og med mange av navnene oversatt til norsk og engelsk. De vanligste artene av sel, hval, fisk, skalldyr og bløtdyr som lever i det nordøstlige Atlanterhav, er tatt med på listen.

Sigbjørn Mehl og Harald Gjøsæter har gjennomgått vertebratene og bidratt til fornying og fornorsking av disse. Åge Fotland har satt engelsk navn på en del arter. Padmini Dalpadado har gått gjennom evertebratene.

Fortsatt dukker det opp mer sjeldne fisker o.a. i havet utenfor Norge og dermed i eksempelvis HI's trål. Forfatterne er mottakelige for informasjon om navn som ennå ikke er på listen og som bør være med.

Listet etter norske navn	36
Listet etter vitenskapelige navn	48
Listet etter engelske navn	77

## INNLEDNING

Mer enn 100 års forskning har gjort artsmangfoldet i faunaen til norsk havforskning til et godt undersøkt område. Artsidentifikasjon er ivaretatt i flere oppslagsverk, se litteraturlisten. Arbeidet med å systematisere prøvetakingen ved Senter for marine ressurser ved Havforskningsinstituttet har vist at det er nødvendig å kunne sette navn på arter ut fra en standard og gjerne entydig kodet.

NODC Taxonomic Code (Anon. 1994) er valgt som standard for taksonomisk kode og for vitenskapelig navn. Utviklingen av dette 12-siffrers taksonomiske kodesystemet foregikk ved National Oceanographic Data Center (NODC) i USA på 1970-talet, og 1. versjon var klar i 1977. ICES og HI tok i bruk systemet til koding av predatorer og byttedyr i forbindelse med magesinnsamlingsprosjektet i Nordsjøen i 1981 (Anon. 1981). Det ble laget et utdrag av den originale kodelisten med de mest vanlige artene i våre farvann (Mehl og Westgård 1984). Denne listen er siden blitt utvidet (Mehl 1985, 1990). Engelske navn kommer delvis fra Fisheries Laboratory i Lowestoft, England sin liste, en del er hentet fra Unescos oversikt over fisk i det nordøstlige Atlanterhav mens resten kommer fra forskjellige andre kilder. Norske navn for fisk, sel og hval er stort sett hentet fra Norsk zoologisk forening sin liste (Anon. 1976) og fra Pethon (1985), ellers er det benyttet det mest vanlige som er i bruk. Dersom flere navn er vanlige, er mer enn ett tillatt, eksempelvis reke og dypvannsreke. Vi gjør oppmerksom på at for flere arter kan det finnes andre navn enn de som er gjengitt her. Det er forsøkt å gi entydige endelser i norske navn for slekt og familie. For art-, slekt- og familiebegrep samt lavere taksonomisk nivå, se Tabell 1, 2 og 3.

Listen er inkludert i egen referansetabell i forskningsdatabasen til Havforskningsinstituttet. Navn på en del arter som hyppig forekommer i instituttets prøver er gjengitt i Fotland *et al.* (1995). For underart har vi valgt å skille mellom bestander, til nå for 4 bestander:

SILD'G03 kodes som bestand 874701020103 (Norsk vårgytende sild)

SILD'G05 kodes som bestand 874701020105 (Nordsjøsild)

SILD'G07 kodes som bestand 874701020107 (Trondheimsfjordsild, Kvitsjøsild etc.)

OSEANISK SNABELUER kodes som bestand 882601015101

Tabell 1. Hovedstrukturen i taksonomiske nivåer i NODC kode-systemet.

	Hierarki register, engelsk	Norsk
P	Phylum	Rekke
C	Class	Klasse
O	Order	Orden
F	Familij	Familie
G	Genus	Slekt
S	Species	Art
V	Subspecies	Underart
" "	Blank e.g. (Subphylum, Superclass, Suborder)	

Tabell 2. Nivåer i hierarkiet av 12 sifret taksonomisk kode, fra rekke til underart.

Taxonomi	Hierarki register, engelsk	Norsk
xx	Phylum, Subphylum, Superorder	Rekke
xxxx	Superclass, Class, Subclass, Superorder, Order, Suborder, Infraorder, Section, Superfamily	Klasse
xxxxxx	Order, Suborder, Family, Subfamily	Orden
xxxxxxxx	Genus	Familie
xxxxxxxxxx	Species	Slekt
xxxxxxxxxxxx	Subspecies, Variety	Art
		Underart

Tabell 3. Eksempel på NODC taksonomisk kode med tilhørende navn fra rekke til art.

NODC kode	Norsk	Vitenskapelig	Engelsk
87	Fisk med kjever	Gnathostomata	Fish with jaws
8713	Skater	Rajiformes	Skates and rayes
871304	Skatefamilien	Rajidae	Skates and rayes
87130401	Skateslekten	Raja	Rays
8713040159	Piggskate	Raja clavata	Thornback ray
